

 Google Cloud

# Preparing for Your Associate Cloud Engineer Journey

Course Workbook

# Certification Exam Guide Sections

- 1 Setting up a cloud solution environment
- 2 Planning and configuring a cloud solution
- 3 Deploying and implementing a cloud solution
- 4 Ensuring successful operation of a cloud solution
- 5 Configuring access and security

Google Cloud

## **Section 1:** **Setting up a cloud solution** **environment**

Google Cloud

## 1.1 | Diagnostic Question 01

Stella is a new member of a team in your company who has been put in charge of monitoring VM instances in the organization. Stella will need the required permissions to perform this role.

How should you grant her those permissions?

- A. Assign Stella a roles/compute.viewer role.
- B. Assign Stella compute.instances.get permissions on all of the projects she needs to monitor.
- C. Add Stella to a Google Group in your organization. Bind that group to roles/compute.viewer.
- D. Assign the “viewer” policy to Stella.

Google Cloud

## 1.1 | Diagnostic Question 02

How are resource hierarchies organized in Google Cloud?

- A. Organization, Project, Resource, Folder.
- B. Organization, Folder, Project, Resource.
- C. Project, Organization, Folder, Resource.
- D. Resource, Folder, Organization, Project.

Google Cloud

## 1.1 | Diagnostic Question 03

What Google Cloud project attributes can be changed?

- A. The Project ID.
- B. The Project Name.
- C. The Project Number.
- D. The Project Category.

Google Cloud

## 1.1 | Diagnostic Question 04

Jane will manage objects in Cloud Storage for the Cymbal Superstore. She needs to have access to the proper permissions for every project across the organization.

What should you do?

- A. Assign Jane the roles/storage.objectCreator on every project.
- B. Assign Jane the roles/viewer on each project and the roles/storage.objectCreator for each bucket.
- C. Assign Jane the roles/editor at the organizational level.
- D. Add Jane to a group that has the roles/storage.objectAdmin role assigned at the organizational level.

Google Cloud

## 1.1 | Diagnostic Question 05

You need to add new groups of employees in Cymbal Superstore's production environment. You need to consider Google's recommendation of using least privilege.

What should you do?

- A. Grant the most restrictive basic role to most services, grant predefined or custom roles as necessary.
- B. Grant predefined and custom roles that provide necessary permissions and grant basic roles only where needed.
- C. Grant the least restrictive basic roles to most services and grant predefined and custom roles only when necessary.
- D. Grant custom roles to individual users and implement basic roles at the resource level.

Google Cloud

## 1.1 | Diagnostic Question 06

The Operations Department at Cymbal Superstore wants to provide managers access to information about VM usage without allowing them to make changes that would affect the state. You assign them the Compute Engine Viewer role.

Which two permissions will they receive?

- A. compute.images.list
- B. compute.images.get
- C. compute.images.create
- D. compute.images.setIAM
- E. computer.images.update

Google Cloud

## 1.2 | Diagnostic Question 07

How are billing accounts applied to projects in Google Cloud? (Pick two.)

- A. Set up Cloud Billing to pay for usage costs in Google Cloud projects and Google Workspace accounts.
- B. A project and its resources can be tied to more than one billing account.
- C. A billing account can be linked to one or more projects.
- D. A project and its resources can only be tied to one billing account.
- E. If your project only uses free resources you don't need a link to an active billing account.

Google Cloud

## 1.2 | Diagnostic Question 08

Fiona is the billing administrator for the project associated with Cymbal Superstore's eCommerce application. Jeffrey, the marketing department lead, wants to receive emails related to budget alerts. Jeffrey should have access to no additional billing information.

What should you do?

- A. Change the budget alert default threshold rules to include Jeffrey as a recipient.
- B. Use Cloud Monitoring notification channels to send Jeffrey an email alert.
- C. Add Jeffrey and Fiona to the budget scope custom email delivery dialog.
- D. Send alerts to a Pub/Sub topic that Jeffrey is subscribed to.

## 1.3 | Diagnostic Question 09

Pick two choices that provide a command line interface to Google Cloud.

- A. Google Cloud console
- B. Cloud Shell
- C. Cloud Mobile App
- D. Cloud SDK
- E. REST-based API

Google Cloud

## 1.3 | Diagnostic Question 10

You want to use the Cloud Shell to copy files to your Cloud Storage bucket.

Which Cloud SDK command should you use?

- A. gcloud
- B. gcloud storage
- C. bq
- D. Cloud Storage Browser

Google Cloud

## 1.3

# Installing and configuring the command line interface (CLI), specifically the Cloud SDK

## Section 2: Planning and configuring a cloud solution

## 2.1 | Diagnostic Question 01

The projected amount of cloud storage required for Cymbal Superstore to enable users to post pictures for project reviews is 10 TB of immediate access storage in the US and 30 TB of storage for historical posts in a bucket located near Cymbal Superstore's headquarters. The contents of this bucket will need to be accessed once every 30 days. You want to estimate the cost of these storage resources to ensure this is economically feasible.

What should you do?

- A. Use the pricing calculator to estimate the costs for 10 TB of regional Standard storage, 30 TB of regional Coldline storage, and egress charges for reads from storage.
- B. Use the pricing calculator to estimate the price for 10 TB of regional Standard storage, 30 TB of regional Nearline storage, and ingress charges for posts to the bucket.
- C. Use the pricing calculator to estimate the price for 10 TB of multi-region Standard storage, 30 TB for regional Coldline storage, and ingress charges for posts to the bucket.
- D. Use the pricing calculator to estimate the price for 10 TB of multi-region Standard storage, 30 TB for regional Nearline, and egress charges for reads from the bucket.

## 2.2 | Diagnostic Question 02

Cymbal Superstore decides to migrate their supply chain application to Google Cloud. You need to configure specific operating system dependencies.

What should you do?

- A. Implement an application using containers on Cloud Run.
- B. Implement an application using code on App Engine.
- C. Implement an application using containers on Google Kubernetes Engine.
- D. Implement an application using virtual machines on Compute Engine.

Google Cloud

## 2.2 | Diagnostic Question 03

Cymbal Superstore decides to pilot a cloud application for their point of sale system in their flagship store. You want to focus on code and develop your solution quickly, and you want your code to be portable.

How do you proceed?

- A. SSH into a Compute Engine VM and execute your code.
- B. Package your code to a container image and post it to Cloud Run.
- C. Implement a deployment manifest and run `kubectl apply` on it in Google Kubernetes Engine.
- D. Code your solution in Cloud Functions.

Google Cloud

## 2.2 | Diagnostic Question 04

An application running on a highly-customized version of Ubuntu needs to be migrated to Google Cloud. You need to do this in the least amount of time with minimal code changes.

How should you proceed?

- A. Create Compute Engine Virtual Machines and migrate the app to that infrastructure.
- B. Deploy the existing application to App Engine.
- C. Deploy your application in a container image to Cloud Run.
- D. Implement a Kubernetes cluster and create pods to enable your app.

Google Cloud

## 2.2 | Diagnostic Question 05

You want to deploy a microservices application. You need full control of how you manage containers, reliability, and autoscaling, but don't want or need to manage the control plane.

- A. Cloud Run
- B. App Engine
- C. Google Kubernetes Engine
- D. Compute Engine

Which compute option should you use?

Google Cloud

## 2.3 | Diagnostic Question 06

Cymbal Superstore needs to analyze whether they met quarterly sales projections. Analysts assigned to run this query are familiar with SQL.

- A. BigQuery
- B. Cloud SQL
- C. Spanner
- D. Firestore

What data solution should they implement?

Google Cloud

## 2.3 | Diagnostic Question 07

Cymbal Superstore's supply chain application frequently analyzes large amounts of data to inform business processes and operational dashboards.

- A. Archive
- B. Coldline
- C. Nearline
- D. Standard

What storage class would make sense for this use case?

Google Cloud

## 2.3 | Diagnostic Question 08

Cymbal Superstore has a need to populate visual dashboards with historical time-based data. This is an analytical use-case.

Which two storage solutions could they use?

- A. BigQuery
- B. Cloud Storage
- C. Firestore
- D. Cloud SQL
- E. Bigtable

## 2.4 | Diagnostic Question 09

Cymbal Superstore is piloting an update to its ecommerce app for the flagship store in Minneapolis, Minnesota. The app is implemented as a three-tier web service with traffic originating from the local area and resources dedicated for it in us-central1. You need to configure a secure, low-cost network load-balancing architecture for it.

How do you proceed?

- A. Implement a premium tier pass-through external https load balancer connected to the web tier as the frontend and a regional internal load balancer between the web tier and backend.
- B. Implement a proxied external TCP/UDP network load balancer connected to the web tier as the frontend and a premium network tier ssl load balancer between the web tier and the backend.
- C. Configure a standard tier proxied external https load balancer connected to the web tier as a frontend and a regional internal load balancer between the web tier and the backend.
- D. Configure a proxied SSL load balancer connected to the web tier as the frontend and a standard tier internal TCP/UDP load balancer between the web tier and the backend.

Google Cloud

## 2.4 | Diagnostic Question 10

What Google Cloud load balancing option runs at Layer 7 of the TCP stack?

- A. Global http(s)
- B. Global SSL Proxy
- C. Global TCP Proxy
- D. Regional Network

Google Cloud

## Section 3: Deploying and implementing a cloud solution

## 3.1 | Diagnostic Question 01

Cymbal Superstore's sales department has a medium-sized MySQL database. This database includes user-defined functions and is used internally by the marketing department at Cymbal Superstore HQ. The sales department asks you to migrate the database to Google Cloud in the most timely and economical way.

What should you do?

- A. Find a MySQL machine image in Cloud Marketplace and configure it to meet your needs.
- B. Implement a database instance using Cloud SQL, back up your local data, and restore it to the new instance.
- C. Configure a Compute Engine VM with an N2 machine type, install MySQL, and restore your data to the new instance.
- D. Use gcloud to implement a Compute Engine instance with an E2-standard-8 machine type, install, and configure MySQL.

Google Cloud

### 3.1 | Diagnostic Question 02

The backend of Cymbal Superstore's e-commerce system consists of managed instance groups. You need to update the operating system of the instances in an automated way using minimal resources.

What should you do?

- A. Create a new instance template. Click **Update VMs**. Set the update type to Opportunistic. Click **Start**.
- B. Create a new instance template, then click **Update VMs**. Set the update type to PROACTIVE. Click **Start**.
- C. Create a new instance template. Click **Update VMs**. Set max surge to 5. Click **Start**.
- D. Abandon each of the instances in the managed instance group. Delete the instance template, replace it with a new one, and recreate the instances in the managed group.

## 3.2 | Diagnostic Question 03

The development team for the supply chain project is ready to start building their new cloud app using a small Kubernetes cluster for the pilot. The cluster should only be available to team members and does not need to be highly available. The developers also need the ability to change the cluster architecture as they deploy new capabilities.

How would you implement this?

- A. Implement an autopilot cluster in us-central1-a with a default pool and an Ubuntu image.
- B. Implement a private standard zonal cluster in us-central1-a with a default pool and an Ubuntu image.
- C. Implement a private standard regional cluster in us-central1 with a default pool and container-optimized image type.
- D. Implement an autopilot cluster in us-central1 with an Ubuntu image type.

### 3.3 | Diagnostic Question 04

You need to quickly deploy a containerized web application on Google Cloud. You know the services you want to be exposed. You do not want to manage infrastructure. You only want to pay when requests are being handled and need support for custom packages.

What technology meets these needs?

- A. App Engine flexible environment
- B. App Engine standard environment
- C. Cloud Run
- D. Cloud Functions

Google Cloud

### 3.3 | Diagnostic Question 05

You need to analyze and act on files being added to a Cloud Storage bucket. Your programming team is proficient in Python. The analysis you need to do takes at most 5 minutes. You implement a Cloud Function to accomplish your processing and specify a trigger resource pointing to your bucket.

How should you configure the --trigger-event parameter using gcloud?

- A. --trigger-event google.storage.object.finalize
- B. --trigger-event google.storage.object.create
- C. --trigger-event google.storage.object.change
- D. --trigger-event google.storage.object.add

## 3.4 | Diagnostic Question 06

You require a Cloud Storage bucket serving users in New York City and San Francisco. Users in London will not use this bucket. You do not plan on using ACLs.

What CLI command do you use?

- A. Run a **gcloud storage objects** command and specify --remove-acl-grant.
- B. Run a **gsutil mb** command specifying a multi-regional location and an option to turn ACL evaluation off.
- C. Run a **gcloud storage buckets create** command, but do not specify --location.
- D. Run a **gcloud storage buckets create** command specifying --placement us-east1, europe-west2

Google Cloud

## 3.4 | Diagnostic Question 07

Cymbal Superstore asks you to implement Cloud SQL as a database backend to their supply chain application. You want to configure automatic failover in case of a zone outage. You decide to use the ***gcloud sql instances create*** command set to accomplish this.

Which gcloud command line argument is required to configure the stated failover capability as you create the required instances?

- A. --availability-type
- B. --replica-type
- C. --secondary-zone
- D. --control\_plane-instance-name

Google Cloud

## 3.4 | Diagnostic Question 08

Cymbal Superstore's marketing department needs to load some slowly changing data into BigQuery. The data arrives hourly in a Cloud Storage bucket. You want to minimize cost and implement this in the fewest steps.

What should you do?

- A. Implement a **bq load** command in a command line script and schedule it with cron.
- B. Read the data from your bucket by using the BigQuery streaming API in a program.
- C. Create a Cloud Function to push data to BigQuery through a Dataflow pipeline.
- D. Use the BigQuery data transfer service to schedule a transfer between your bucket and BigQuery.

## Section 4: Ensuring successful operation of a cloud solution

## 4.1 | Diagnostic Question 01

You want to view a description of your available snapshots using the command line interface (CLI). What gcloud command should you use?

- A. gcloud compute snapshots list
- B. gcloud snapshots list
- C. gcloud compute snapshots get
- D. gcloud compute list snapshots

Google Cloud

## 4.1 | Diagnostic Question 02

You have a scheduled snapshot you are trying to delete, but the operation returns an error.

What should you do to resolve this problem?

- A. Delete the downstream incremental snapshots before deleting the main reference.
- B. Delete the object the snapshot was created from.
- C. Detach the snapshot schedule before deleting it.
- D. Restore the snapshot to a persistent disk before deleting it.

Google Cloud

## 4.1 | Diagnostic Question 03

Which of the following tasks are part of the process when configuring a managed instance group? (Pick two.)

- A. Defining Health checks.
- B. Providing Number of instances.
- C. Specifying Persistent disks.
- D. Choosing instance Machine type.
- E. Configuring the operating system.

## 4.6 | Diagnostic Question 10

Cymbal Superstore's supply chain management system has been deployed and is working well. You are tasked with monitoring the system's resources so you can react quickly to any problems. You want to ensure the CPU usage of each of your Compute Engine instances in us-central1 remains below 60%. You want an incident created if it exceeds this value for 5 minutes. You need to configure the proper alerting policy for this scenario.

What should you do?

- A. Choose resource type of VM instance and metric of CPU load, condition trigger if any time series violates, condition is below, threshold is .60, for 5 minutes.
- B. Choose resource type of VM instance and metric of CPU utilization, condition trigger all time series violates, condition is above, threshold is .60 for 5 minutes.
- C. Choose resource type of VM instance, and metric of CPU utilization, condition trigger if any time series violates, condition is below, threshold is .60 for 5 minutes.
- D. Choose resource type of VM instance and metric of CPU utilization, condition trigger if any time series violates, condition is above, threshold is .60 for 5 minutes.

## Section 5: Configuring access and security

## 5.1 | Diagnostic Question 01

You need to configure access to Spanner from the GKE cluster that is supporting Cymbal Superstore's ecommerce microservices application. You want to specify an account type to set the proper permissions.

What should you do?

- A. Assign permissions to a Google account referenced by the application.
- B. Assign permissions through a Google Workspace account referenced by the application.
- C. Assign permissions through service account referenced by the application.
- D. Assign permissions through a Cloud Identity account referenced by the application.

Google Cloud

## 5.1 | Diagnostic Question 02

You are trying to assign roles to the dev and prod projects of Cymbal Superstore's e-commerce app but are receiving an error when you try to run **set-iam policy**. The projects are organized into an ecommerce folder in the Cymbal Superstore organizational hierarchy. You want to follow best practices for the permissions you need while respecting the practice of least privilege.

What should you do?

- A. Ask your administrator for roles/resourcemanager.projects.setIamPolicy roles for each project.
- B. Ask your administrator for the roles/resourcemanager.folderIamAdmin for the ecommerce folder.
- C. Ask your administrator for the roles/resourcemanager.organizationAdmin for Cymbal Superstore.
- D. Ask your administrator for the roles/iam.securityAdmin role in IAM.

Google Cloud

## 5.1 | Diagnostic Question 03

You have a custom role implemented for administration of the dev/test environment for Cymbal Superstore's transportation management application. You are developing a pilot to use Cloud Run instead of Cloud Functions. You want to ensure your administrators have the correct access to the new resources.

What should you do?

- A. Make the change to the custom role locally and run an update on the custom role.
- B. Delete the custom role and recreate a new custom role with required permissions.
- C. Copy the existing role, add the new permissions to the copy, and delete the old role.
- D. Create a new role with needed permissions and migrate users to it.

## 5.2 | Diagnostic Question 04

Which of the scenarios below is an example of a situation where you should use a service account?

- A. To directly access user data
- B. For development environments
- C. For interactive analysis
- D. For individual GKE pods

Google Cloud

## 5.2 | Diagnostic Question 05

Cymbal Superstore is implementing a mobile app for end users to track deliveries that are en route to them. The app needs to access data about truck location from Pub/Sub using Google recommended practices.

- A. API key
- B. OAuth 2.0 client
- C. Environment provided service account
- D. Service account key

What kind of credentials should you use?

Google Cloud

## 5.2 | Managing service accounts

### Courses

## 5.3 | Diagnostic Question 06

Which Cloud Audit log is disabled by default with a few exceptions?

- A. Admin Activity audit logs
- B. Data Access audit logs
- C. System Event audit logs
- D. Policy Denied audit logs

Google Cloud

## 5.3 | Diagnostic Question 07

You are configuring audit logging for Cloud Storage. You want to know when objects are added to a bucket.

Which type of audit log entry should you monitor?

- A. Admin Activity log entries
- B. ADMIN\_READ log entries
- C. DATA\_READ log entries
- D. DATA\_WRITE log entries

Google Cloud

**Plan time  
to prepare**

When will you take the exam?

How many weeks do you have to prepare?

How many hours will you spend preparing for the exam each week?

How many total hours will you prepare?

Google Cloud

# Example 6-week plan

Week 1	Week 2	Week 3	Week 4	Week 5	Week 6
Google Cloud Fundamentals: Core Infrastructure  Implement Load Balancing on Compute Engine Skill Badge	Architecting with Compute Engine	Getting started with GKE  Set Up an App Dev Environment on Google Cloud Skill Badge	Logging, Monitoring and Observability in Google Cloud  Develop your Google Cloud Network Skill Badge	Getting Started with Terraform for Google Cloud  Build Infrastructure with Terraform on Google Cloud Skill Badge	Sample questions  Review documentation
					Google Cloud

## Weekly study plan

Now, consider what you've learned about your knowledge and skills through the diagnostic questions in this course. You should have a better understanding of what areas you need to focus on and what resources are available.

Use the template that follows to plan your study goals for each week. Consider:

- What exam guide section(s) or topic area(s) will you focus on?
- What courses (or specific modules) will help you learn more?
- What Skill Badges or labs will you work on for hands-on practice?
- What documentation links will you review?
- What additional resources will you use - such as sample questions?

You may do some or all of these study activities each week.

Duplicate the weekly template for the number of weeks in your individual preparation journey.

Google Cloud

## Weekly study template (example)

Area(s) of focus:	Configuring access using IAM
Courses/modules to complete:	Google Cloud Fundamentals: Core Infrastructure, Module 2 Getting Started with Google Cloud Architecting with Google Compute Engine, Module 4 IAM
Skill Badges/labs to complete:	Develop your Google Cloud Network
Documentation to review:	<a href="https://cloud.google.com/iam/docs/overview">https://cloud.google.com/iam/docs/overview</a> <a href="https://cloud.google.com/architecture/prep-kubernetes-engine-for-prod#managing_identity_and_access">https://cloud.google.com/architecture/prep-kubernetes-engine-for-prod#managing_identity_and_access</a> <a href="https://cloud.google.com/iam/docs/creating-custom-roles">https://cloud.google.com/iam/docs/creating-custom-roles</a> <a href="https://cloud.google.com/docs/authentication/production#automatically">https://cloud.google.com/docs/authentication/production#automatically</a> <a href="https://cloud.google.com/docs/authentication/">https://cloud.google.com/docs/authentication/</a>
Additional study:	Sample questions 1–5
